

Tightening nuts with fast and reliable Pick & Place systems?

Discover the new N ED presenter

for both manual and automatic use

Do you want to make nut tightening operations faster and more reliable in any type of production layout?

The new **N ED - Nut EasyDriver** automatic nut presenter from Fiam is designed to ensure **smooth and fast work cycles** and guarantee precision, both in manual applications with straight screwdrivers and in automatic applications with nutrunner motors.

Nut EasyDriver ensures a continuous and controlled flow of different types of nuts, discriminating against defective ones and increasing process efficiency.

FOR MANUAL OR AUTOMATIC PICK & PLACE

The new N ED automatic presenter is an effective and versatile solution for a range of production needs, thanks to its innovative features:

- **Frontal nut extraction:** faster and more effective thanks to the open well pick-up station
- Convenient **collection of defective nuts** at the end of the shift thanks to the **removable drawer**
- **Small nut retaining sockets** for tightening in even the tightest spaces
- **Electronic speed control and adjustment,** particularly useful in automatic stations with screwdriving motors installed on slides, manipulators, or Cobots
- **No nut jamming or machine downtime:** the presence detection sensor blocks the supply of the next nut until the first available one is picked up.

FOR ERGONOMIC WORKSTATIONS

For manual use, N ED is a solution that improves not only productivity but also workplace ergonomics, as it **eliminates the steps of picking up and positioning** the nut on the screwdriver tip, making the operator's job easier.

The nut is picked up directly with the screwdriver without using the fingers, which benefits the operator, who is no longer required to perform repetitive movements to pick up and position nuts, which are often small or very small in size.
